

Nursing our mothers back to health: NIH's plans to improve maternal health

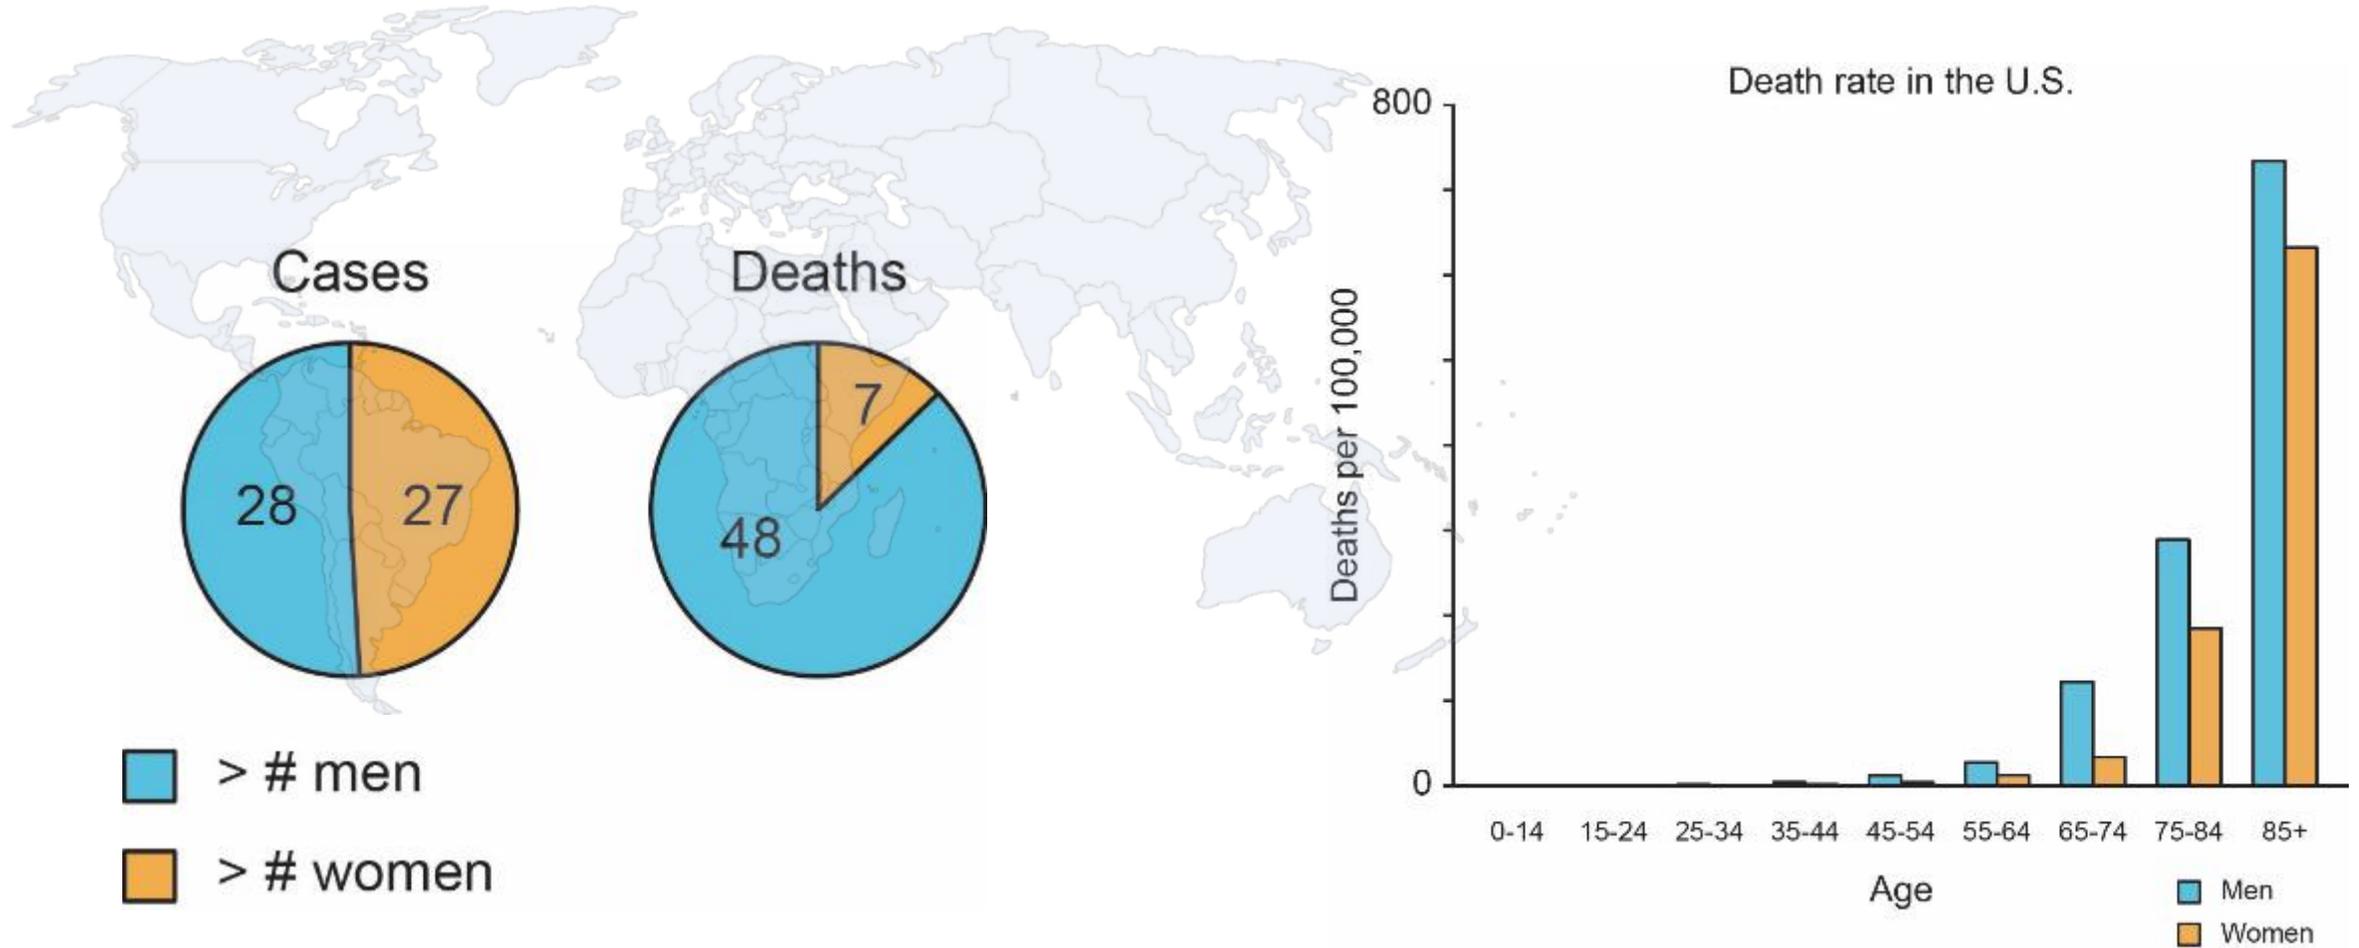

Janine A. Clayton, M.D.

NIH Associate Director for Research on Women's Health
Director, Office of Research on Women's Health
National Institutes of Health

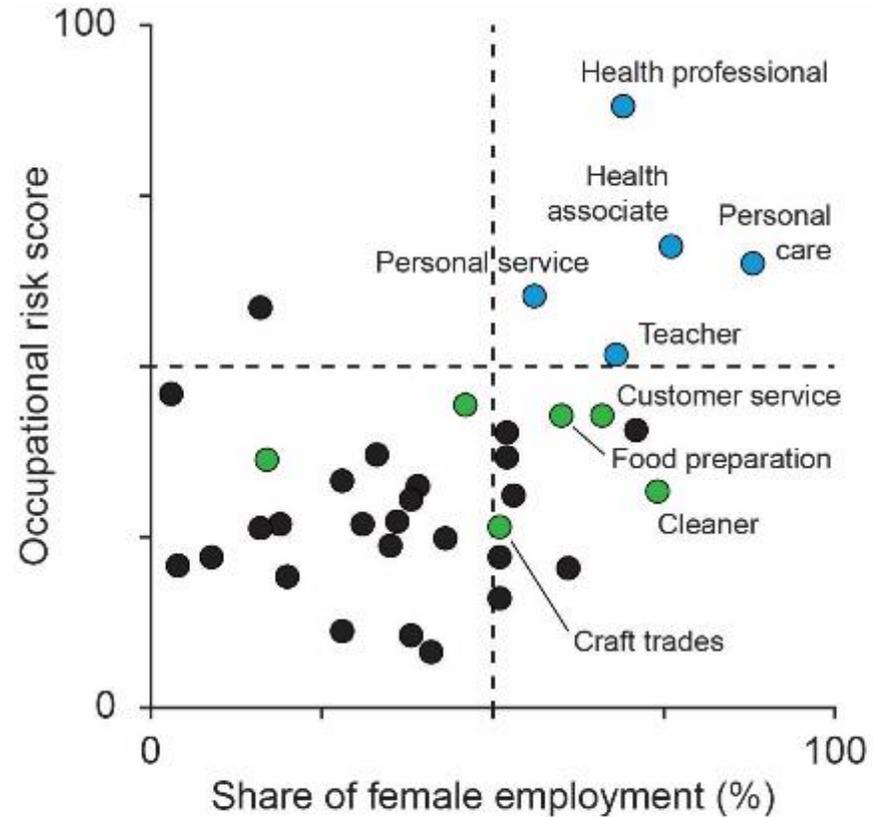

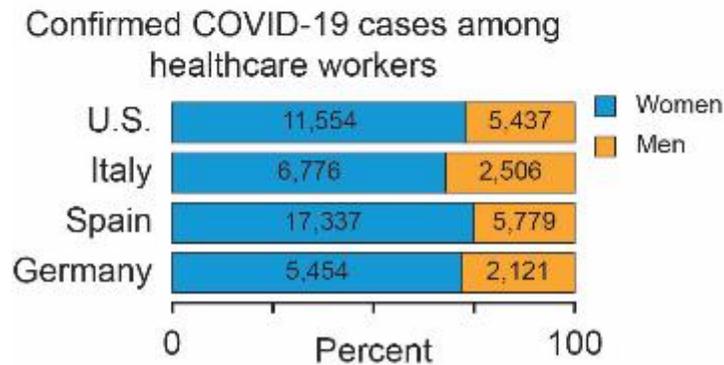

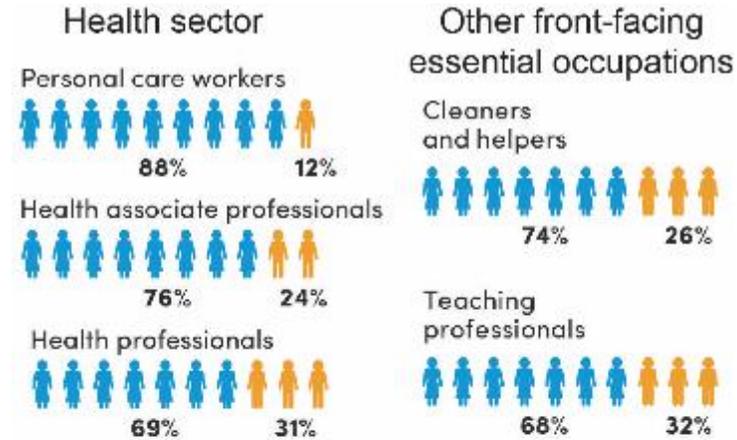

January 26, 2021

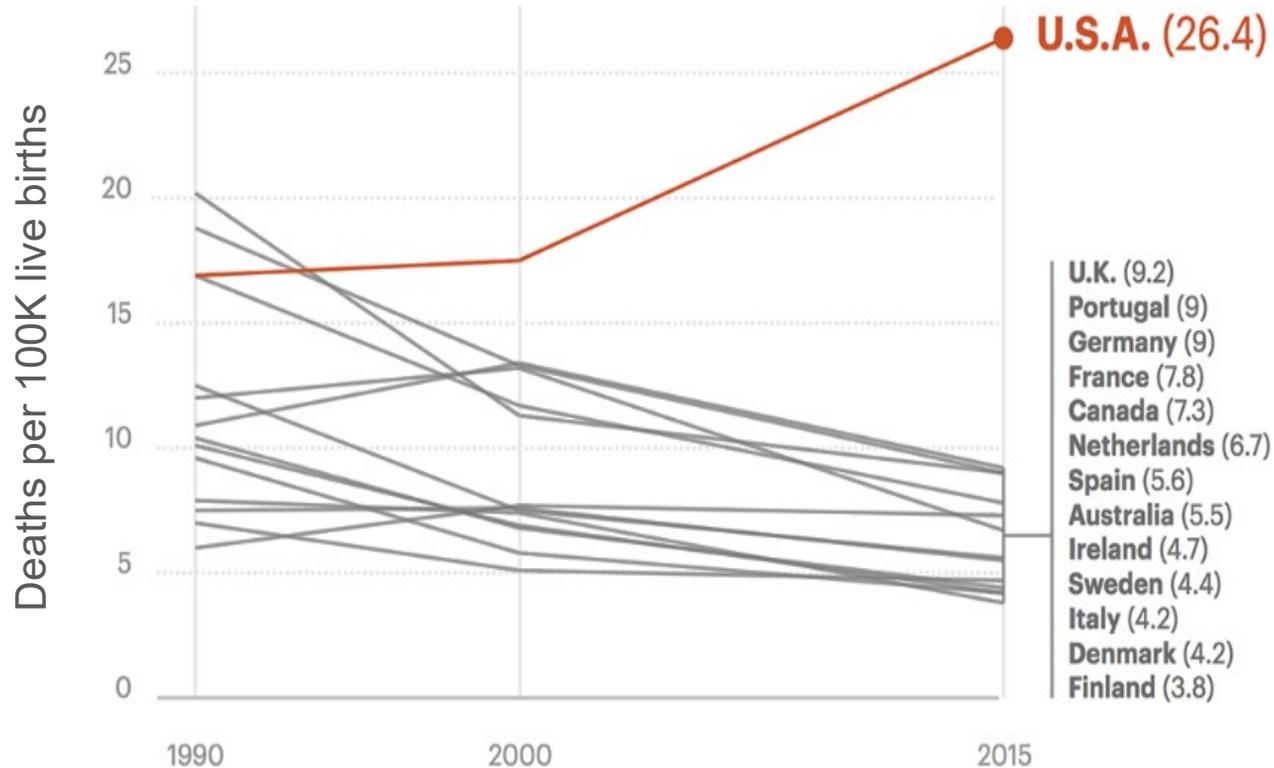

COVID-19 underscores the need for inclusive research

Women are more vulnerable to infection from occupational risk

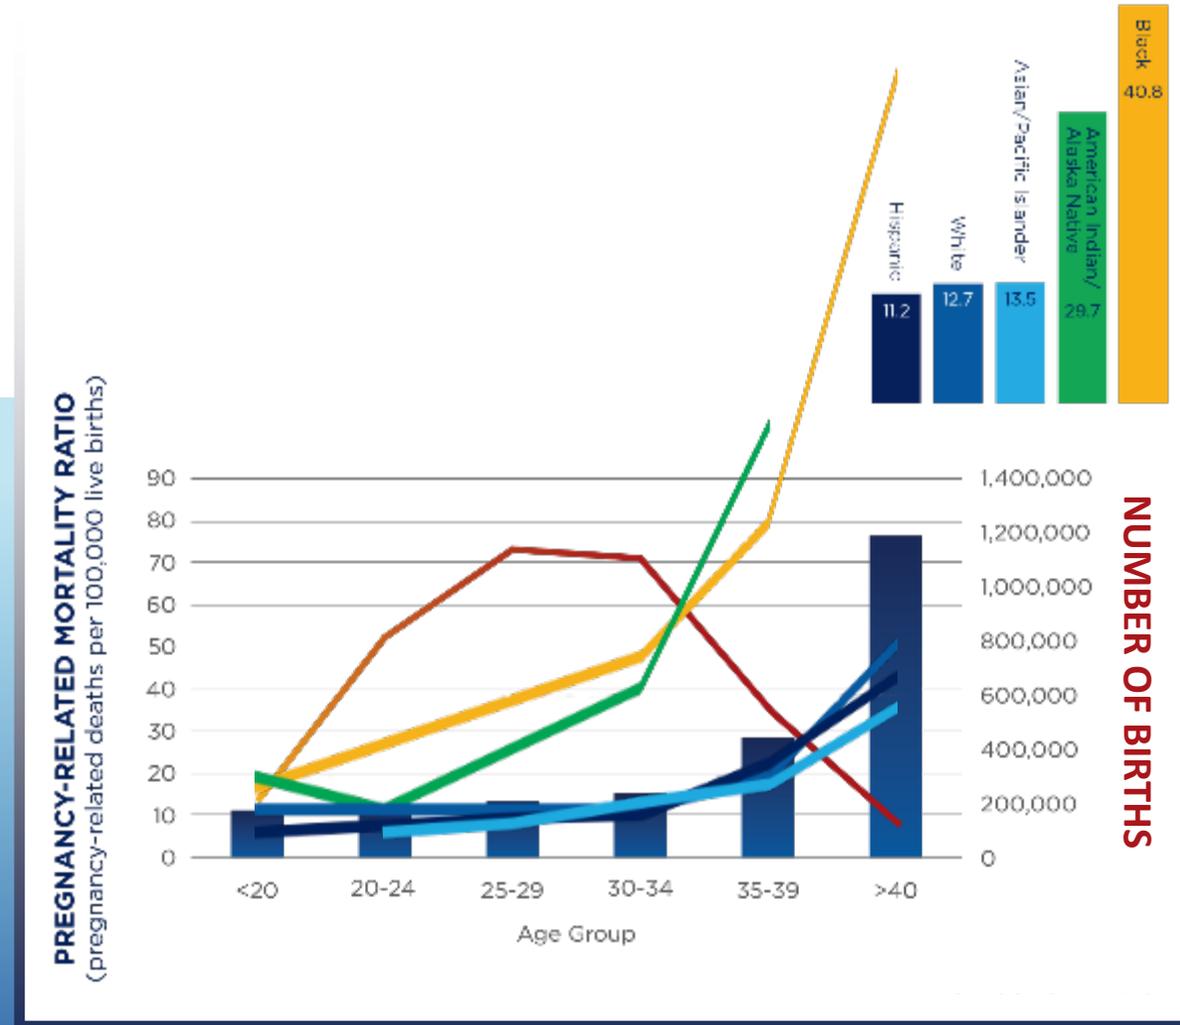

Maternal mortality is increasing in the U.S. as it declines around the world

GBD 2015 Maternal Mortality Collaborators Agrawal P. 2015. *Bulletin of the World Health Org.* 93: 135. 2016. *Lancet* 388: 1775-1812.

The causes of maternal mortality are diverse and complex

HHS. 2020. Healthy women, healthy pregnancies, healthy futures: Action plan to improve maternal health in America.

The causes of maternal mortality are diverse and complex

Rise in pre-pregnancy obesity in 49 states from 2016 to 2019

Maternal mortality is the tip of the iceberg: We must solve many problems to improve women's health

ORWH Mission

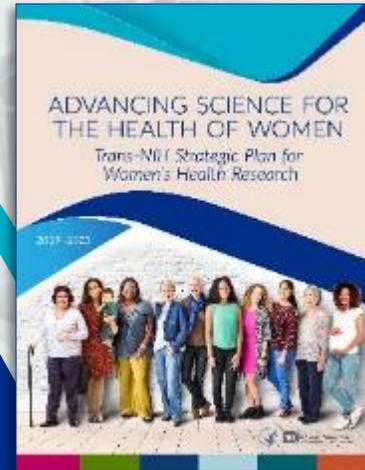

Enhance and expand women's health research

Include women and minority groups in clinical research

Promote career advancement for women in biomedical careers

NIH Vision

Sex and gender integrated into biomedical research

Every woman receives evidence-based care

Women in science careers reach their full potential

NIH's Strategic Plan for women's health research aims to help mothers

1.5 Expand research on female-specific conditions and diseases, including reproductive stages, and maternal and gynecologic health.

2.4 Expand and refine methods to improve recruitment and retention of women underrepresented in clinical research.

3.2 Identify collaborative opportunities and leverage partnerships to disseminate research.

4.4 Promote and support policies, mentoring and networks, collaborations, and infrastructure to retain and advance women in their careers.

5.2 Identify priority areas for additional study to advance the health of women.

NIH-wide efforts target maternal health disparities

IMPROVE

NICHD, OD, ORWH

Maternal Mortality Task Force

- Cardiovascular disease
- Infection/immunity
- Mental health

FY20: 36 Awards, \$7.5M

NIH Eunice Kennedy Shriver National Institute of Child Health and Human Development

U3

ORWH

Understudied, Underreported, Underrepresented women

- Sickle cell disease
- Fibroid growth
- Biologic & social determinants of severe maternal morbidity

FY20: 11 Awards, \$1.6M

IDeA States

NIGMS, ORWH

Institutional Development Award States program

Expand women's health research & research capability across the U.S.

FY20: 19 Awards, \$4.8M

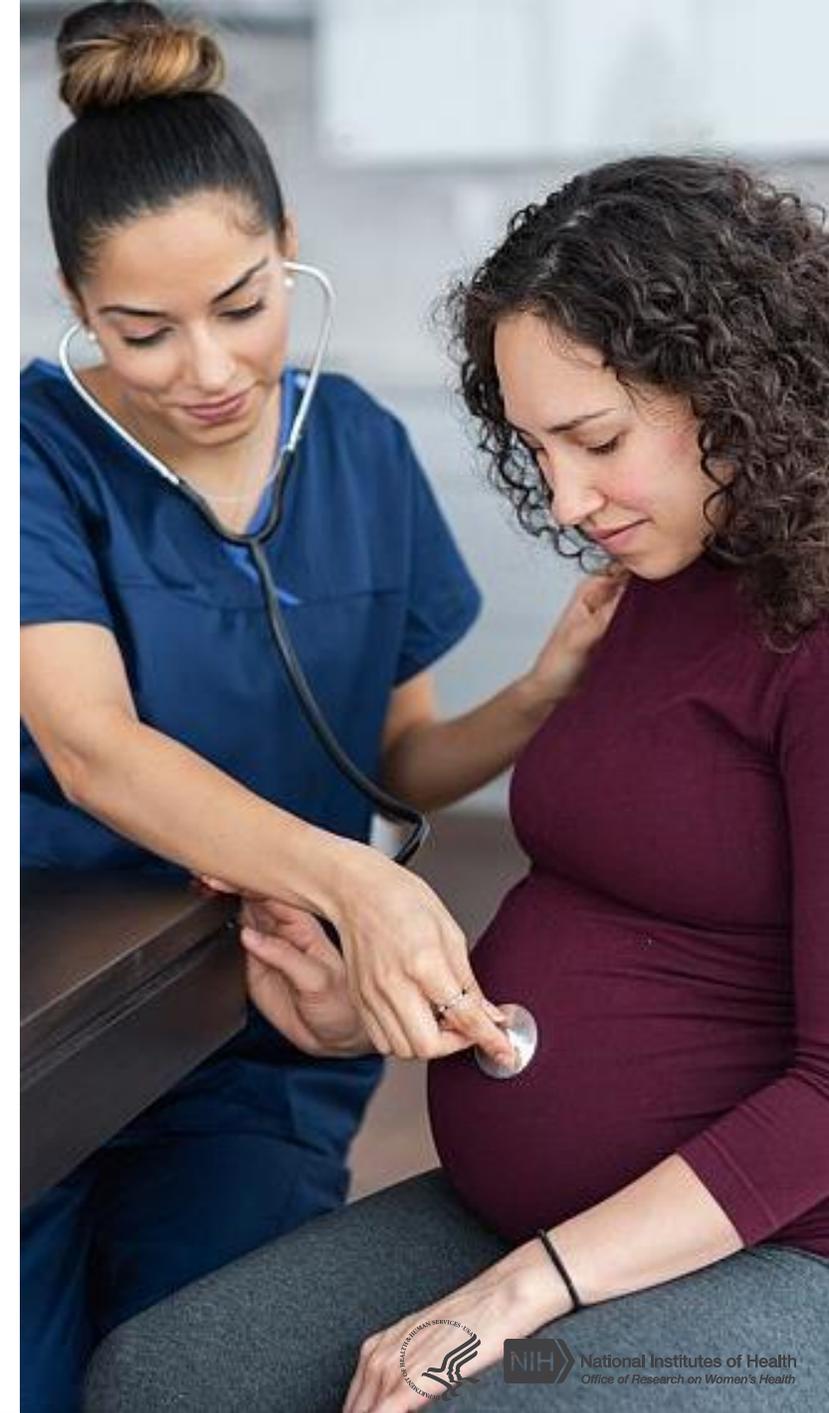

NIH National Institute of General Medical Sciences

NIH National Institutes of Health
Office of Research on Women's Health

IMPROVE: Implementing a Maternal health and Pregnancy Outcomes Vision for Everyone

- NIH-wide program that funds interdisciplinary research in foundational biology, behavioral, & sociocultural science
 1. Gain evidence on causes of maternal mortality & morbidity
 2. Improve health for women before, during, & after delivery
 3. Reduce preventable causes of maternal deaths
- Promote health equity in the U.S.
 - Evaluate structural & health care system issues in populations with high rates of maternal deaths & complications
 - Develop community partnerships to assess vulnerabilities & implement interventions to improve outcomes
- 36 projects (\$7.5M) in FY2020
 - 17 ICOs participating; 12 funding projects

Goal 1: Incorporate community partnerships and participation to resolve health disparities

IC	Organization	Project
NICHD	Washington University	A health equity paradigm shift: Predictors of healthy pregnancy in African American women.
NIDA	Medical University of South Carolina	Reducing racial disparities and maternal mortality associated with untreated peripartum substance use and mental health disorders.
OD	Michigan State University	Mitigating the impact of implicit bias on maternal morbidity and mortality for African American women.
NINR	University of Pennsylvania	The role of host-microbial interactions in altering preterm birth risk among black women.

Goal 2: Research leading causes of MMM to strengthen care and prevention strategies and improve outcomes

IC	Organization	Project
NIMH	University of Washington	Remote supervision for implementing collaborative care for perinatal depression.
NICHD	Massachusetts General Hospital	Maternal obesity and inflammation as drivers of maternal morbidity in COVID-19.
NINDS	Columbia University Health Sciences	Neurovascular unit dysfunction in women with severe preeclampsia.
NHLBI	Massachusetts General Hospital	Signatures of dysfunctional mitochondrial fatty acid oxidation that predispose to early-onset preeclampsia.
NCATS	Georgetown University	Maternal morbidity and mortality: Risk factors, early detection and personalized intervention.

Goal 3: Develop an integrated understanding of MMM to identify risk factors and develop interventions

IC	Organization	Project
NHLBI	Miriam Hospital	Predictors of <i>de novo</i> development of obstructive sleep apnea in pregnancy.
NHLBI	Magee-Women's Res. Inst. & Found.	Preconception contributors to severe maternal morbidity in black and white women.
NIMHD	University of Central Florida	Social stressors and inflammation: A mixed methods approach to preterm birth.
NHLBI	Kaiser Foundation Research Institute	Prenatal blood pressure patterns to predict pregnancy-related hypertension and later life cardiovascular risk.
NICHD	University of Chicago	Improving health by linking postpartum and well-baby visits.
NIMH	University of Michigan	Relationship between mental health coverage and outcomes for privately insured women with perinatal mood and anxiety disorders (PMAD).

IMPROVE can synergize with NINR goals

Innovative Models of Care for Reducing Inequities in Maternal Health

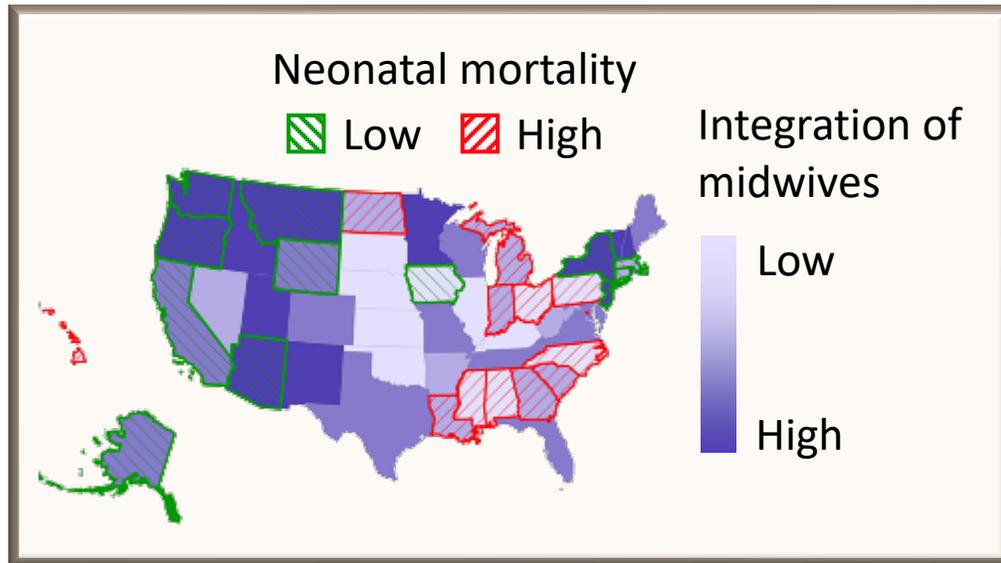

- Fund research on structural inequalities that affect maternal health disparities.
 - Policies that improve access to regular care
 - Initiatives to improve access to healthy food
 - Practices to reduce effects of bias and racism
- Develop person-centered approaches that are sustainable and scalable.
- Incorporate community-generated knowledge & include community members in research teams.
- Implement protocols to respect pregnant women, listen to them, and support them.

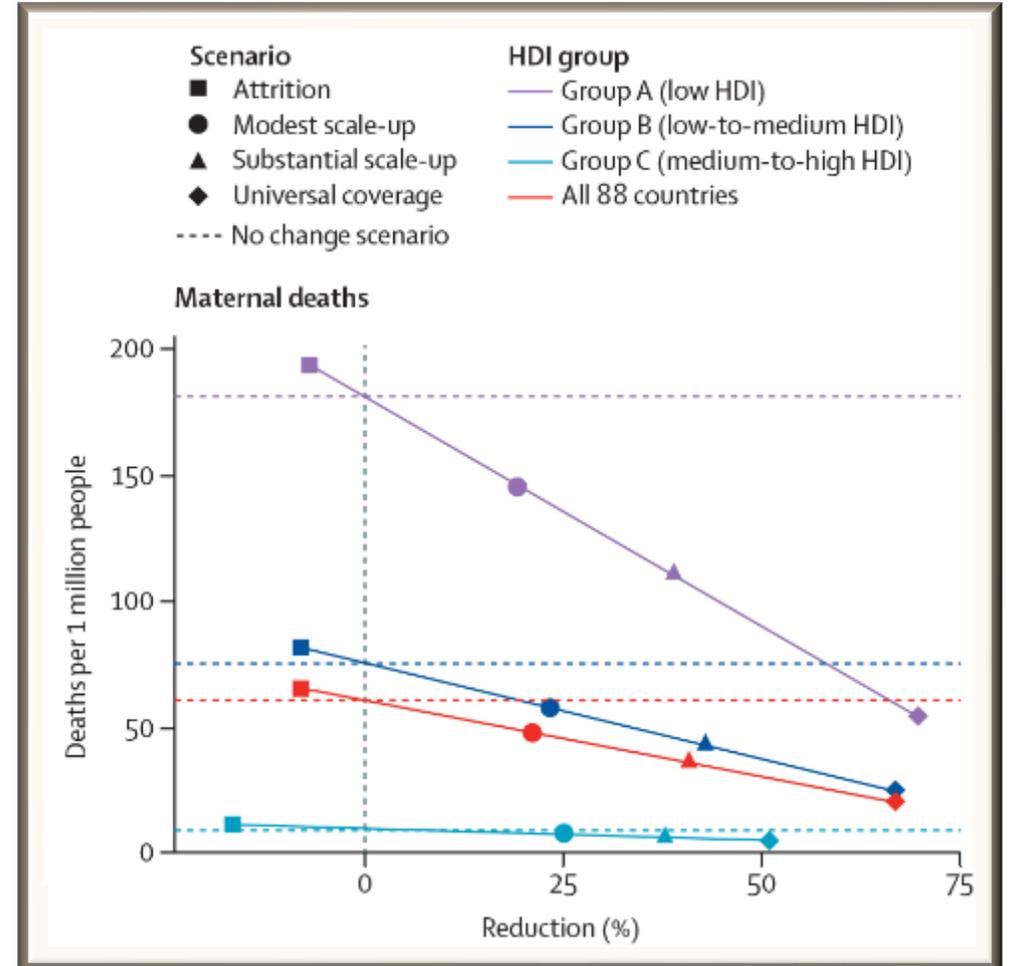

Nurses improve pregnancy outcomes

Library of Congress (<https://www.loc.gov/item/2001704194/>)

Vedam et al. 2018. *PLoS ONE* 13: e0192523.

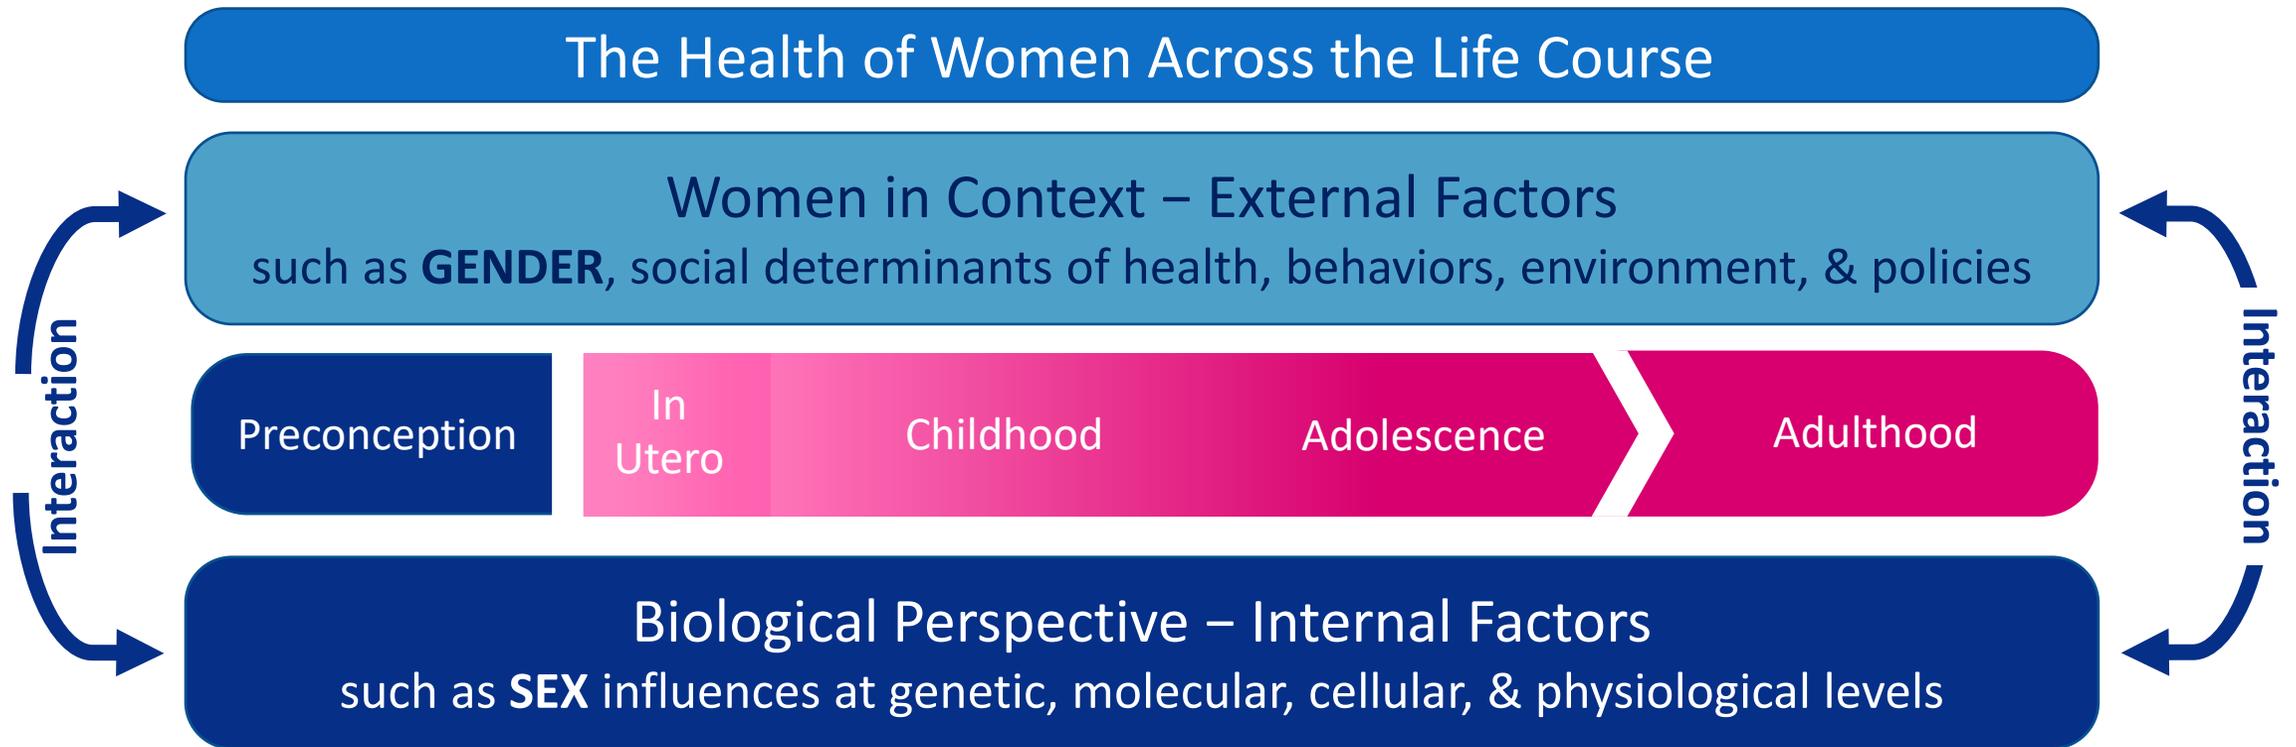

Nove et al. 2021. *Lancet Glob. Health* 9: e24-32.

Moving the focus from reproductive health to the entire life course

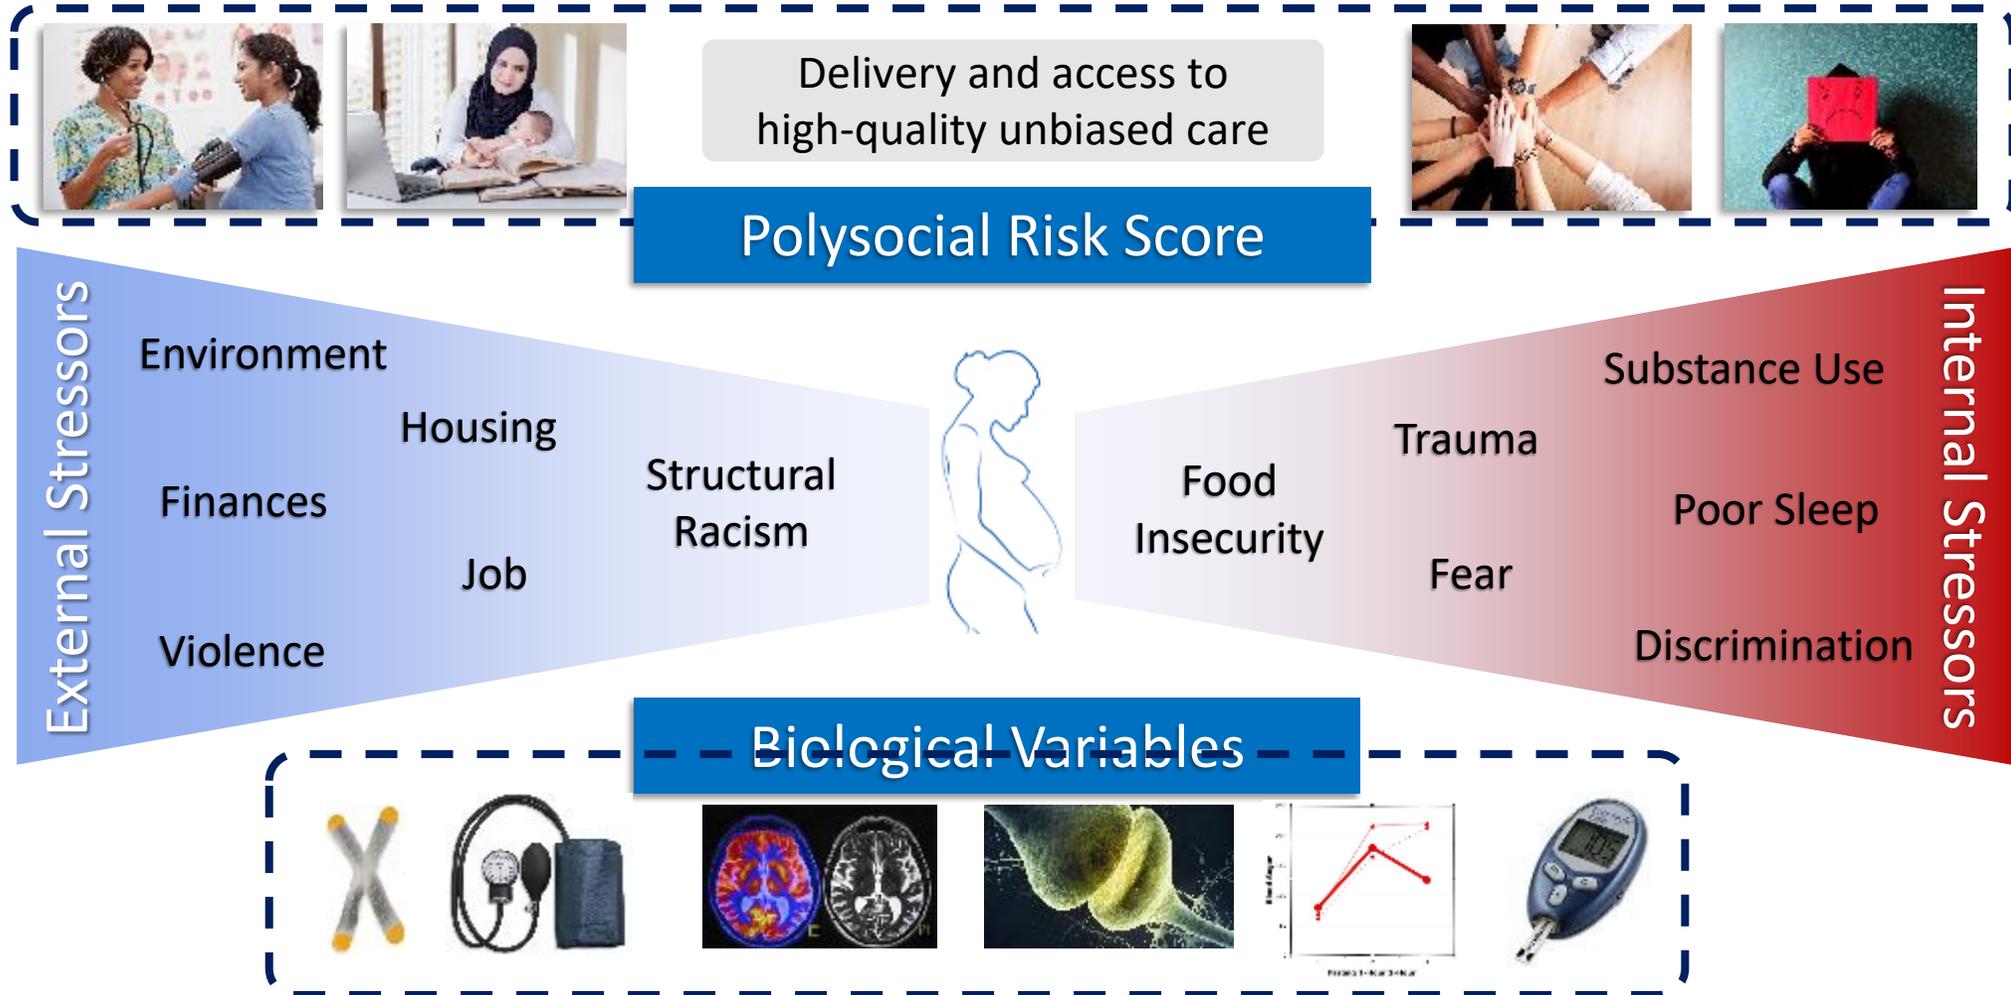

“**Women’s health**” has traditionally had a narrow focus on reproductive health. Today, “**health of women**” encompasses their whole being: head to toe, genetics to environment, and over the life course.

ORWH uses a multidimensional framework to model the health of women

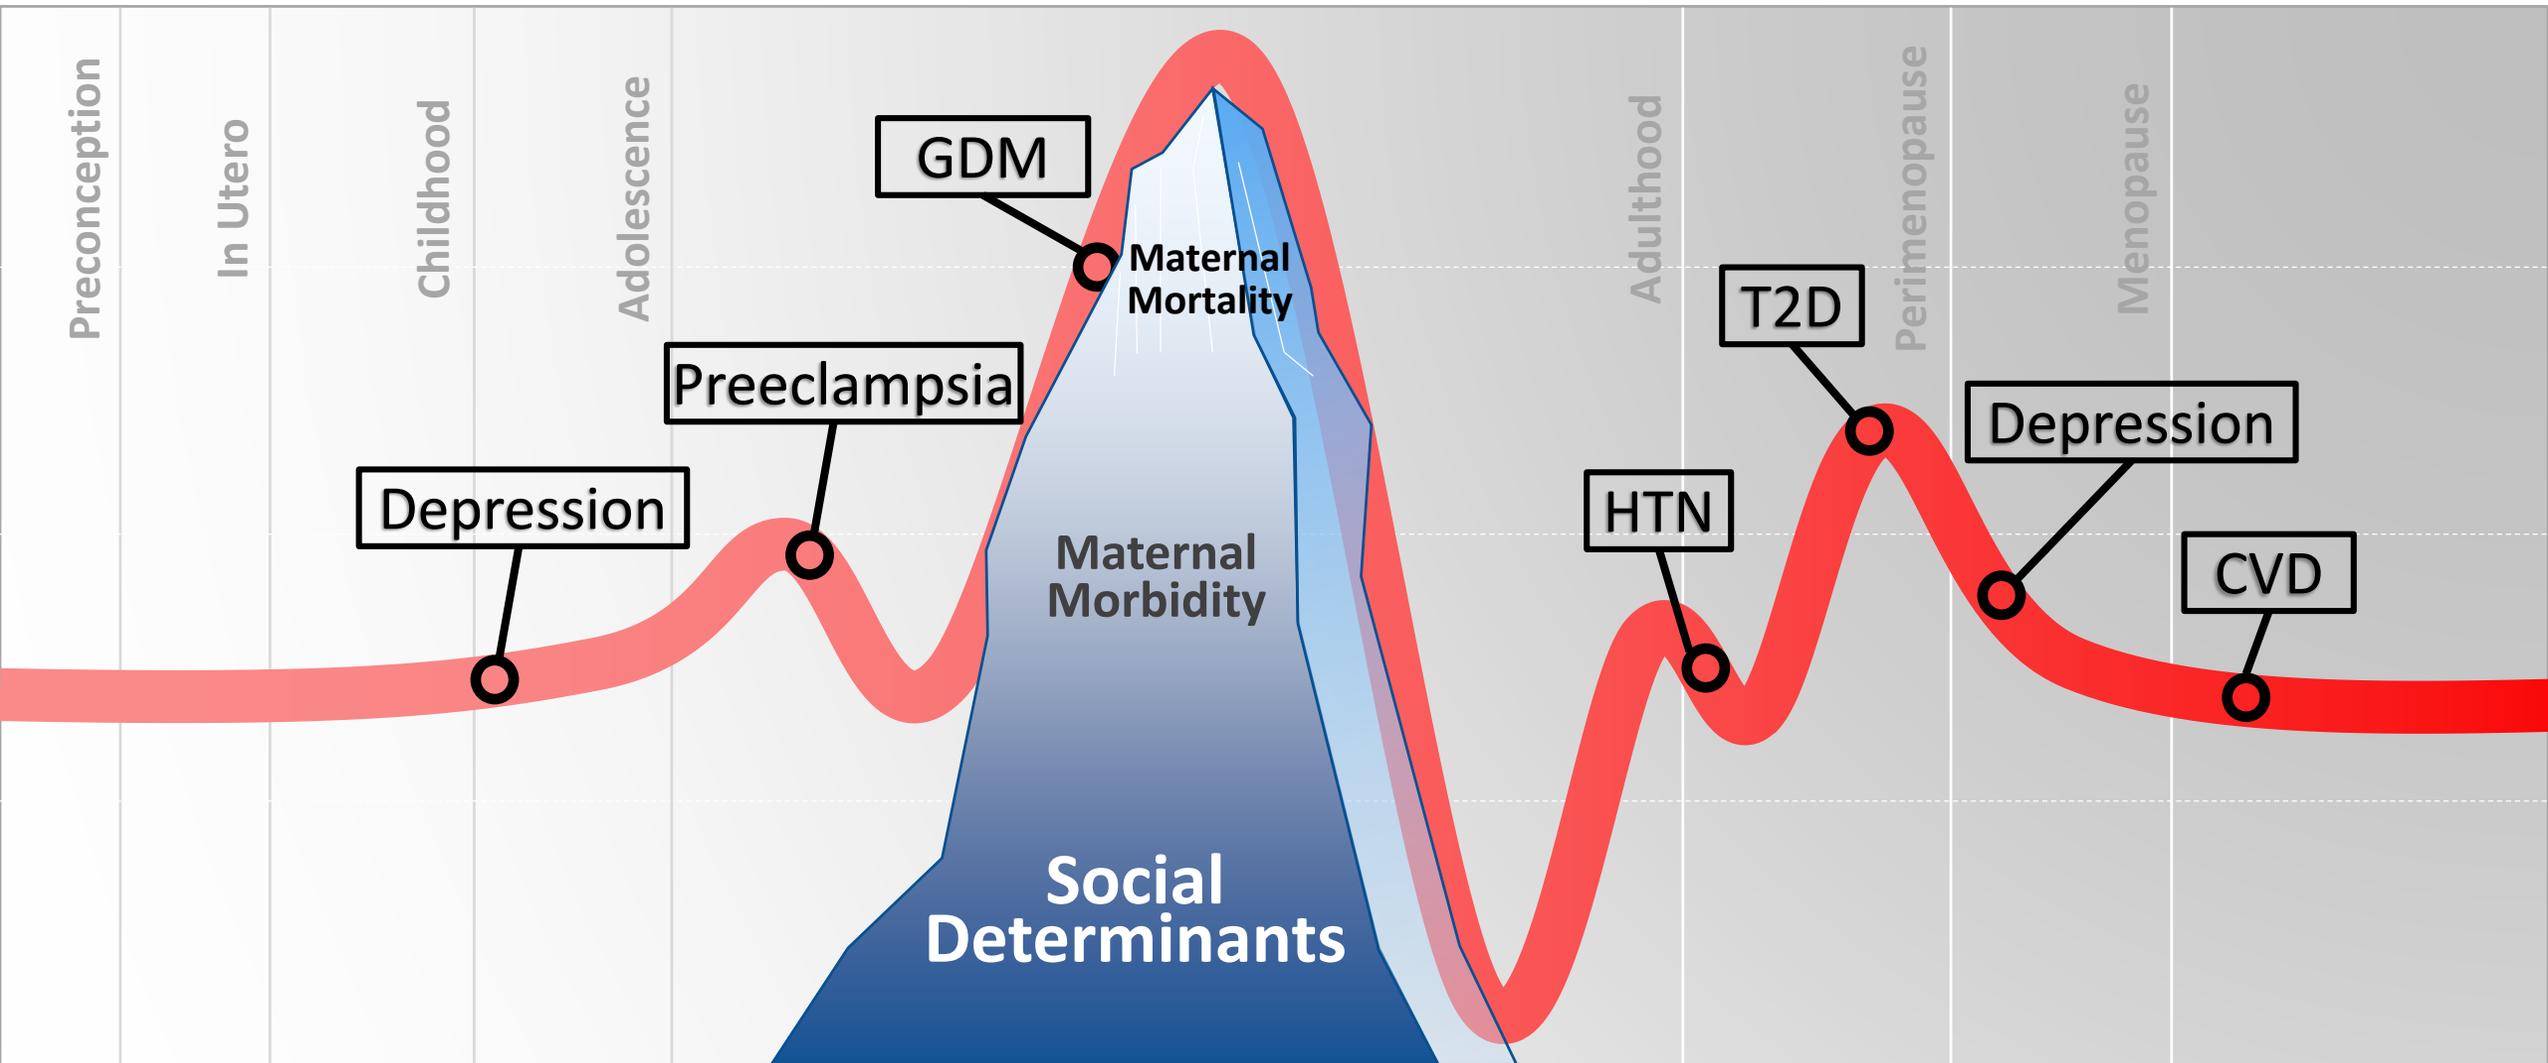

Measuring the impact of biological and social determinants of health to predict maternal risk/resilience

Geronimus et al. 2006. *Am. J. Public Health* 96: 826-833.; Lu et al. 2019. *Ann. Epidemiol.* 36: 33-39.
 Figueroa et al. 2020. *J. Am. Med. Assoc.* 232: 1553-1554.

Pregnancy is a stress test, and we are failing our mothers

Disparities in maternal health reflect inequities in quality of life and security

THE STATE OF WOMEN

BY IRENE BERMAN-VAPORIS, LAWSON PARKER, AND ROSEMARY WARDLEY

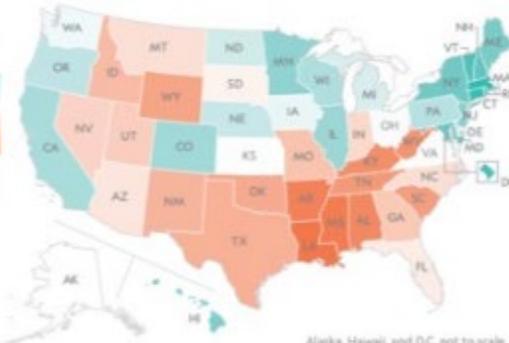

Employment • Education • Maternal mortality • Political clout • Physical safety

How U.S. women fare in these key aspects of life varies widely across the nation, according to a new benchmark of women's well-being. The 2020 U.S. Women, Peace and Security Index measures women's inclusion in society, sense of security, and exposure to discrimination. It shows how obstacles and opportunities for women differ from state to state, driven by economic, racial, and ethnic disparities, among other factors.

National Geographic partnered with the Georgetown Institute for Women, Peace and Security to illustrate the U.S. Index.

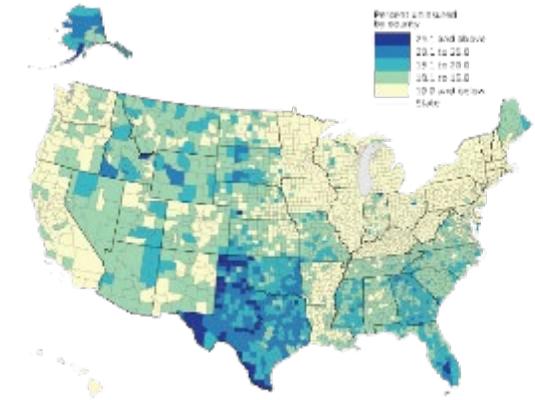

No place in the country achieves the best or worst possible score. All six New England states rank in the top 10; the five lowest performing states are located in the South.

Best 1
NA 0.71
Range of scores
LA 0.57
Worst 0

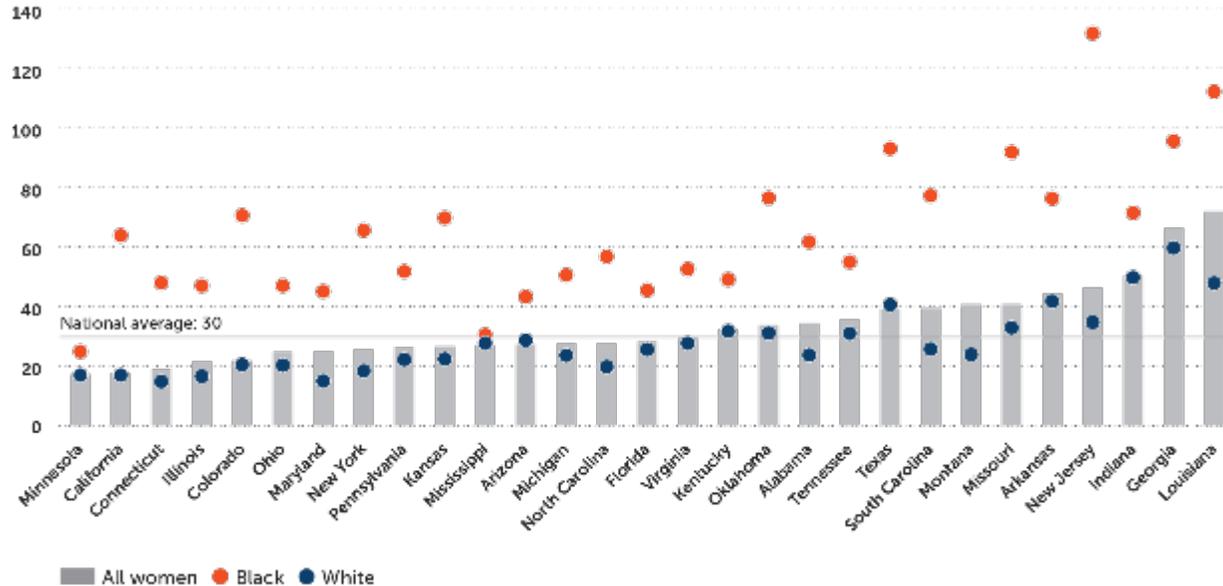

Massachusetts (RANK: 1)
Proactive legislative reforms in the state, including an equal pay act updated in 2018, have helped close gender gaps.

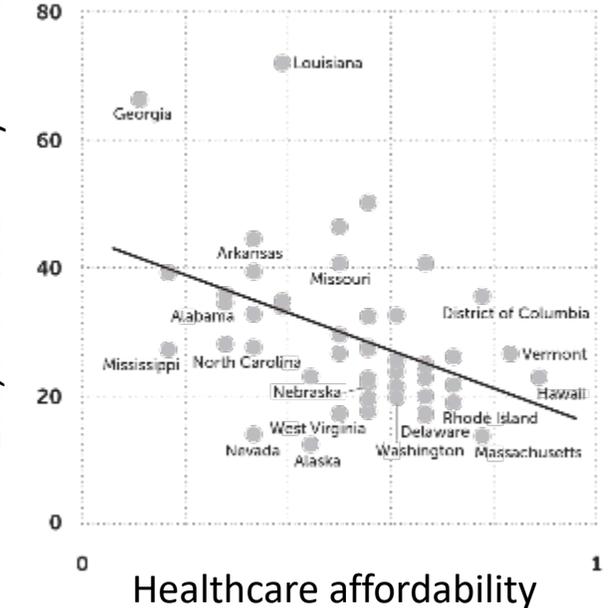

Uninsured Rate

Maternal mortality (per 100,000 live births)

Maternal mortality (per 100,000 live births)

<https://giwps.georgetown.edu/usa-index/>

NIH has an extensive portfolio, but how can we leverage these data to fill the gaps in knowledge & care?

NIDDK

NIEHS

Pregnancy as a vulnerable time period for women's Health

NIMHD

Addressing Racial Disparities in MMM

NIGMS

IDEA States Women's Health Research Supplement

ORWH

Long-term effects of blood glucose during pregnancy.

- Launched in 2000
- > 23,000 women
- Highly diverse cohort

Environmental chemicals on maternal physiology, and long-term maternal health effects.

- Launched in 2019
- [RFA-ES-20-003](#)

Mechanisms underlying racial disparities, interventions, or prevention strategies.

- Launched in 2020
- [RFA-MD-20-008](#)

Expand research & research capability to address important issues of women's health.

- Launched in 2020
- [NOT-GM-20-017](#)

FY2017-19 | 49 awards
Examples:

- Insulin resistance, neonatal adiposity, race/ethnicity
- Sickle cell disease & maternal morbidity
- Fibroid growth in African American women

*While NICHD is the scientific and financial lead, this list highlights data being collected NIH-wide.

ORWH funds research on Understudied, Underreported & Underrepresented populations

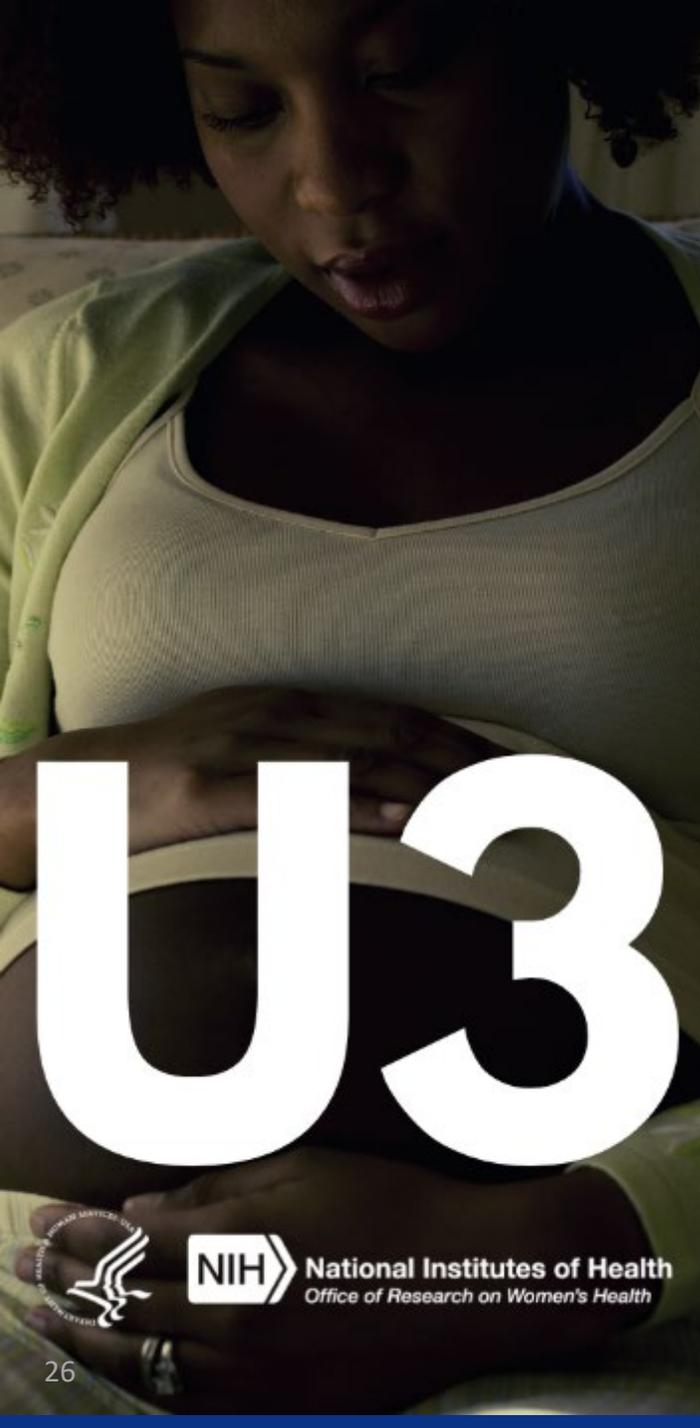

Influences of sex/gender at intersection of race/ethnicity and other social determinants of health and disease

\$1.6 million funded in FY20: 11 awards with five ICOs

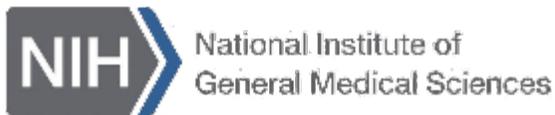

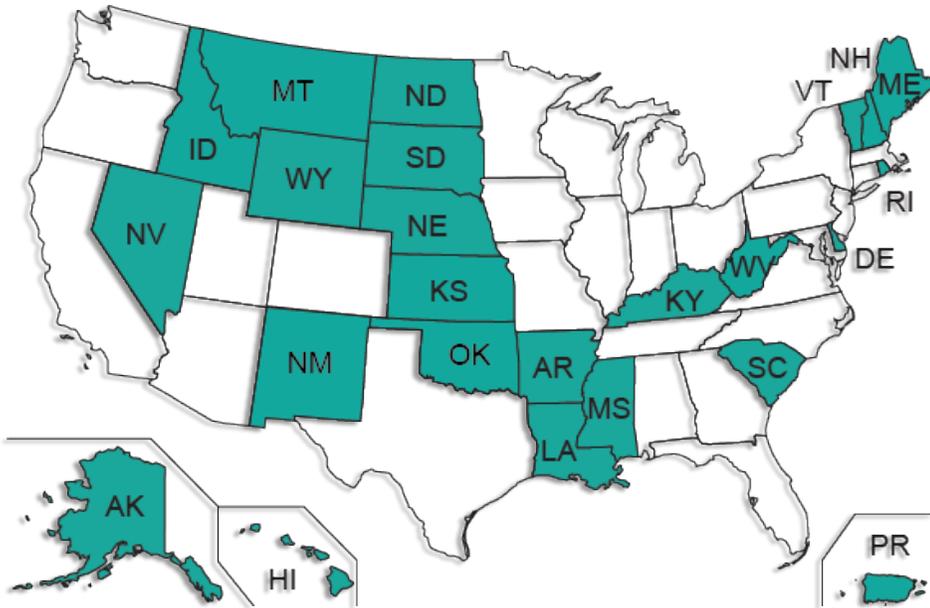

3 awards fund maternal health/pregnancy projects, including:

- Biologic and social determinants of severe maternal morbidity and its racial/ethnic disparities;
- Associations between life course socioeconomic conditions, placental epigenetic and transcriptional modifications, and pre-term birth;
- Prenatal substance use and risk factors among prenatal sexual minority women.

U3

ORWH partners with NIGMS to expand the IDeA states program to include women's health research

FY2020 Projects

Implementing the systematic treatment and management of postpartum hypertension (STAMPP-HTN) bundle in a high-risk Mississippi population.

Cardiac extracellular matrix remodeling failure in postpartum maternal health.

Novel mechanisms of protein misfolding and aggregation in preeclampsia.

Pilot testing of a mobile health intervention designed to increase physical activity and improve morbidity & mortality-related outcomes among pregnant women in rural settings.

JWH Special Issue examines multiple aspects of MMM and lays the groundwork for a new research agenda

Feb 2021 will be a **Special Issue** of the *Journal of Women's Health*

- 21 articles on maternal morbidity and mortality
- Authors from 20 NIH ICOs & 5 other HHS agencies describe the maternal health research agenda

JOURNAL OF WOMEN'S HEALTH

Clinical Outcomes in High-Risk Pregnancies Due to Advanced Maternal Age

Rosaly Correa-de-Araujo, MD, MSc, PhD¹ and Sung Sug (Sarah) Yoon, RN, PhD²

NIH programs complement the HHS Action Plan and the Surgeon General's Call to Action for Maternal Health

4 KEY GOALS emphasize a life course perspective to improve maternal and infant health outcomes.

3 TARGETS to improve maternal health outcomes

Reduce maternal mortality rate by 50% in 5 years.

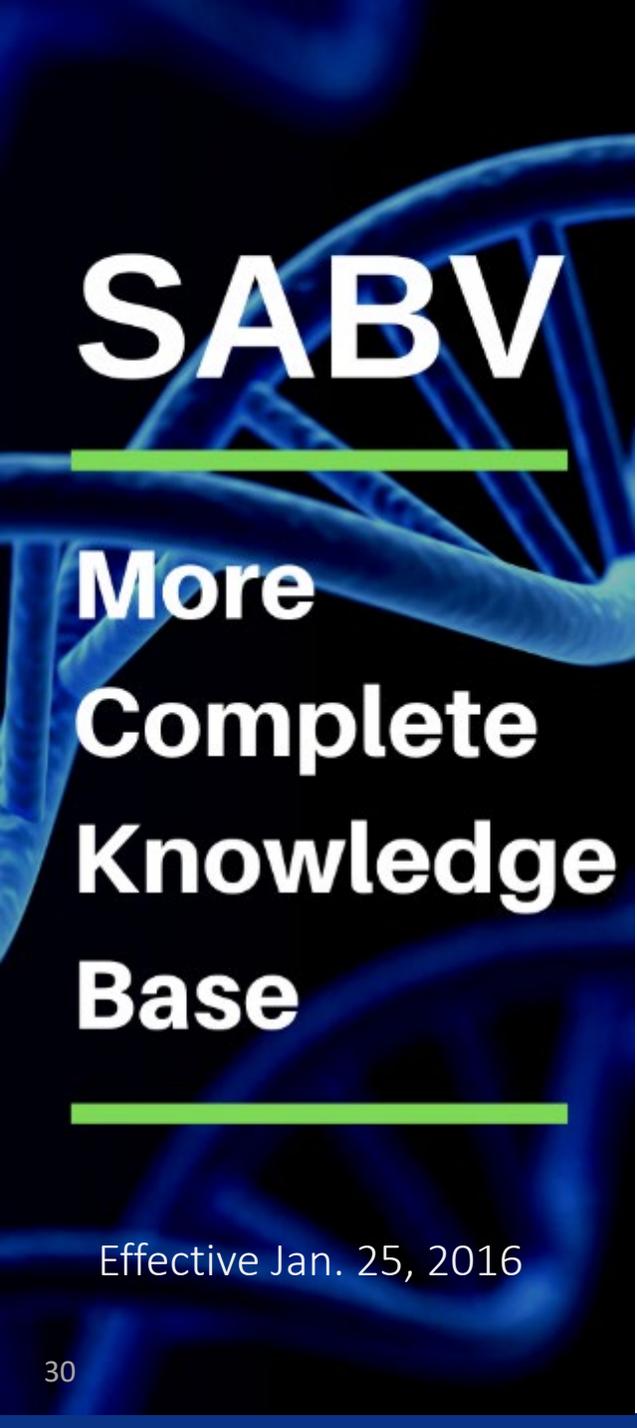

Reduce low-risk cesarean delivery rate by 25% in 5 years.

Achieve blood pressure control in 80% of women of reproductive age with hypertension in 5 years.

SABV

More Complete Knowledge Base

Effective Jan. 25, 2016

NIH's policy to consider Sex As a Biological Variable

Improves design of clinical research and trials

Informs sex- and gender-aware diagnosis and treatment

Enables **individualized** care for women and men

Fosters **system-based understanding** of the ways sex and gender influence health and disease

The NIH policy to consider Sex As a Biological Variable set new expectations for biomedical research

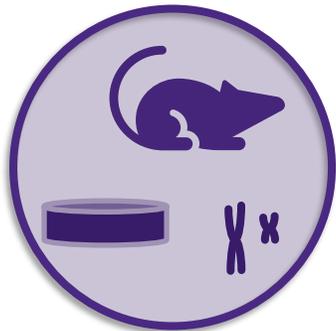

“NIH expects that sex as a biological variable will be factored into research **designs, analyses, and reporting** in vertebrate animal and human studies.”

Effective Jan. 25, 2016

The logo for SABV (Sex As a Biological Variable) features the letters 'SABV' in a large, white, sans-serif font. The text is centered between two horizontal green bars. The background of the entire slide is a blue-tinted image of a DNA double helix.

Integrating sex/gender, race & ethnicity, & age across the research continuum to advance health equity
